The 100-year old company named the software after the Boston Harbor. It's the word for harbor, in fact, although the Harbor is a bit less than 2 miles from where Autodesk is situated. Some of the most famous buildings in Boston are situated right in the harbor, in the financial district of the city. For more information check out the next section on history. If you are to buy this software you will have to invest a lot of money. You will also need to pay for an Autodesk Account which costs $150 (you can choose a monthly or yearly) or buy a CAD Add-On Service (AAA) for a one-time payment of $4,000. And, if you don't have a payment plan set up, you will be hit with an additional $15 charge for the first month. But, you have the option to buy it for a yearly payment of $1,290 and a monthly payment of $89. App Maker is an application for making web applications using JavaScript and HTML, which can be run as a desktop application or a web application. A creator can import data from an AutoCAD DWG file or from a CSV file and then use the Autodesk data integration tools to publish the application to the Autodesk web application store. App Maker allows developers to build their own web applications with Autodesk's templates and services, such as cloud-based application hosting. AutoLISP, Visual LISP and Visual C++ add-on for AutoCAD provide VBA-like functionality. AutoLISP runs AutoCAD commands and provides some mouse and keyboard control. The Scripting and Macro Builder tools in AutoCAD allow the user to create LISP scripts. The Visual LISP add-on provides a visual programming environment for creating custom tools. Visual C++ supports creating and integrating applications with AutoCAD. In 2011, Autodesk announced that it would introduce cloud based autodesk 360, their comprehensive suite of 3D design software applications, which would be available to customers on Microsoft Windows and Mac. It is available through the web and is intended to compete with companies such as SketchUp, Revit and ArchiCAD. Project Portfolio Manager Project Portfolio Manager (PPM) is a project management software product from Autodesk for software development. It can be used by architects, industrial designers, project managers, and software development teams. It has a base in AutoCAD, but also supports Revit, Dynamo and Maya. The product version released in September 2006 added support for dynamic in-context collaboration, which was previously only available in the InterAct team project management platform. The new PPM workflow, which is based on the Dynamic Task Request workflow of InterAct, automates most of the activities of a typical project delivery. This capability is a major step in the evolution of the PPM product. The industry has adopted the PPM workflow because it helps reduce onsite time. A typical project, which is project-managed, leads to a significant reduction in offshore-work hours.

The switchover to PPM is used for over 90 percent of major projects today. The initial target audience is architects, but other professionals, including project management and construction management personnel, have used it to build successful projects in the past. PPM is the only software that can track engineering workflows, from inception through end of project a1d647c40b

Drawing Timeline: Get a bird's eye view of your projects and get a complete picture of how drawings progress through the process. Add live annotations to the drawing timeline, with notes that update your drawings automatically with the most current data. (video: 1:05 min.) Markup Assist: Add comments to existing parts of drawings, with live feedback. The DrawMan® Markup Assist tool allows you to quickly add comments to selected parts of drawings, with automatic feedback that refreshes your comments automatically with changes in the drawing. (video: 1:15 min.) Drawing Tags: View, categorize, and manage all of the drawing assets in your drawings. Any drawing entity, such as text, lines, blocks, and arcs, can be tagged. Tags can be used to organize drawing parts, to sort drawings, to create views, and to create custom reports. (video: 1:19 min.) Drawing Notes: A key aspect of the design process. Add notes to specific parts of drawings and add comments to entities within a drawing. These live comments update automatically with changes in the drawing. They can be moved, deleted, and copied from one part of a drawing to another. (video: 1:14 min.) Embedded Geometry: Attach geometry, including blocks, to drawings. Embedded geometry provides additional control over the drawing, as well as the ability to access this embedded geometry directly from within the drawing, while retaining the flexibility of the drawing. For example, you can place an order in a drawing, and update the order without closing and reopening the drawing. (video: 1:03 min.) Seamless Scheduling: Create a living schedule of your project work, with blocks, layers, and views. The Planner application features modules for automating workflows and processes. The Scheduler allows you to control which blocks are used for each drawing step, ensuring that
