## Tomtom-ttsystem-patch-carminat

Carminat : Patch Tomtom file I bought a Carminat TomTom and it has a blue serial number, so I updated to TomTom Live and started my first patch. Of course I did a factory restore of the SD card, as I always do. However, I found that my gps receiver is not connecting properly to my rds-tmc. I need help. Files on the SD card are lowercase, but I think that there might be upper/lower case letters in the files. I changed the lower case to capital letters, deleted all files named \*. ttsystem and tried to run a repair option. I downloaded the file from their website, extracted it and put it on the SD card. When I restarted the computer, the phone started up normally. I ran the patch, then did a factory restore. The device is almost working fine, but the map is not working properly. When I start the TomTom Live,

---

the map is blank, but the little arrow is flashing, and navigation works. I unplugged and plugged back in and it works fine. I tried restarting the phone, but the map is blank. I used a prepaid TomTom, as I need a working gps at the moment. I have a FM radio in my car, so I'm not interested in getting the car CD (can't get it in the car). .. How do I patch the SD card? I'll do a factory restore first, then use tomtom update on the new SD card, does that sound right? I just need help with patching the SD card. I am not familiar with the ttsystem files on my Carminat TomTom. How do I patch that? I have a right and left hand. What do I do? I am not a native speaker, so this is probably a dumb question :D. A: Hello welcome to the community. First of all restart the device. Then follow the steps explained below: Connect the Tomtom to the computer. Rename the SD card as "TomTom\_fresh.zip" (lowercase) Then go

---

to your IOS device IOS 9.0.2. Then click on the Settings application and under Network select "Paired" then connect with TomTom. Look for the "Device Name" in the IOS application. Then cut the "device name" and 6d1f23a050
